COMPARISON STUDY OF LOWCODE DEVELOPMENT VERSUS TRADITIONAL APPLICATION DEVELOPMENT APPROACH

Aim :

To compare traditional application development and low code application development based on their features advantages and disadvantages.

Features of traditional vs lowcode :

Traditional development	LowCode development
Required programming knowledge	Minimal coding required
Developed using languages like Java, Python, C++ etc...	Uses drag & drop ~~feature~~ interface.
Longer development time	Fast development time
High Flexibility and customization	Limited customization.
Suitable for complex application	Suitable for simple to medium business app.

Advantages of traditional and lowcode :

Traditional Development :

* Highly customized
* Suitable for large and complex projects
* Better control over application design and performance
* Supports advantages integrations.

Low code Development:

* Faster application development
* Required less coding knowledge
* Reduces development cost
* Easy maintenance and updates.

Disadvantages of traditional and low code development:

Traditional development:

* Time consuming
* Required skilled developers
* Higher development and maintenance cost
* Longer testing and deployment phase.

Result:

Thus traditional development offers high flexibility and customization, while low code development enable faster application development with minimal coding. The suitable approach depends on the projects requirement.
